They Say “We Value Your Privacy”, But Do They?: A privacy and surveillance community of practice speaks out

Michele Gibney, Molly Rainard, and Ellen Dubinsky (in absentia) with assistance from Dorothea Salo, Lisa Levesque, and Nick Shockey

Acquisitions Institute 2024
Show of Hands - Who Read the Timberline Acquisitions Institute Code of Conduct?

Terms*

By registering for this event I agree to adhere to the Acquisitions Institute Code of Conduct.

To review the code of conduct, please visit this webpage: https://acquisitionsinstitute.org/acquisitions-institute-code-of-conduct/ (also linked at the top of this form).

☐ I have read and agree to the terms above.

**Academic Platforms & Your Privacy**

**Briefing for Faculty**

Online tools have become central to conducting research and building an academic career. As many parts of the research process have shifted online, serious issues related to privacy and data control are becoming more apparent. Some academic publishers are evolving into data analytics businesses that own and monetize personal information, often in ways that faculty may be uncomfortable with. As a leading research foundation has noted, these platforms—and the tracking they enable—can “fundamentally contradict academic freedom.” There are a variety of actions that faculty can take to mitigate these risks.

**Key Privacy Concerns**

- Academic platforms, such as faculty information systems, can collect extensive personal data about individual faculty, including demographic information, evaluations, external reviews, and other career history data (including publications and research funding). This data can be combined with data from additional vendor platforms, allowing vendors to create complete faculty member profiles and to develop new metrics for productivity.
- Educational technology platforms, such as learning management and homework systems, can collect personally identifying information from both students and faculty that could be sold or shared with third parties, including data brokers. FERPA offers limited but inadequate protections for student data. This can create risks for both students and the faculty who assign them.
- Some publishers are building platforms that span the entire research process from application, hiring, discovery, collecting, and analyzing data, publishing, evaluation, and academic career management. This has the potential to create platform lock-in and commercially influence what research is valued and supported.
- Many academic platforms are also incorporating Artificial Intelligence (AI), often without transparency or careful review by their users, potentially creating or reinforcing biases in the academic publication process.

**What You Can Do**
Show of hands - How well do you know your privacy terms with a vendor (could be any vendor at all)?

5 = Super familiar … 1 = No idea!

What about, specifically, Elsevier?

And, think about:

- Have you seen places where vendors hide privacy clauses?
- Is the header of that clause even always “Privacy”?
P&S Contracts Working Group

Sharing user data with third party vendors of social media, data brokers, advertising and marketing
Show of hands - How many in the audience are administrators?

We need your help!

Problems we’re facing with contract language require institutional support.
Contract Language WG: Takeaways so far

- Importance of having administrators on board
- Importance of library values/statements on user privacy
- More reports forthcoming!
  - Science Direct Report = growth in the WG!
  - Building on the report
    - Using this information at our own libraries.
    - Awareness of “nesting doll” privacy policies
- Deliverables (DPA, negotiation guide, etc.)
Show of hands - How many know which of your licensing terms are under an NDA?

Think about:

● Have you seen places where vendors hide NDA clauses?
● Is that clause always called an NDA or is it sometimes “Confidentiality” or even something else?
FOIA Project

- Collaboration between Resource Library and Contract Language
- Previous **FOIA campaigns**
- Research Questions
  - ★ Remediing information asymmetries
  - ★ Getting full picture of privacy practices
  - ★ Comparative contract analysis
P&S Resource Library Working Group Still To Do

- Additional Briefing documents:
  - Administrators
  - Shared/Collective Governance
  - Office of Research
  - Instructional Designers
  - Campus IT
  - Campus Procurement
  - Unions
- AMA Style Webcast Launch
P&S Contracts Working Group Still To Do

- Privacy Negotiation Guide
- Data Privacy Addendum
  - Friendly vendors
  - Pilot institutions
- Guest speakers
- Privacy support calls
- Additional vendor reports
How You Can Get Involved

- Join SPARC as an institutional member
- Join a Working Group or the FOIA Project (you don’t need to be a SPARC member!)
- Read and share the Elsevier ScienceDirect report (& future reports!)
- Consider using the DPA when it’s released
- Use the Resource Library Briefings to jumpstart conversations
- Inform students about separate privacy terms on different vendor platforms
